

Table Top Installation

There are two methods of installation; ceiling and table top. We have listed and illustrated the steps that are required to conduct a table top installation. As you can see, there is very little installation time, knowledge and tools required to install a projector in this manner. If you prefer to have a more professional look, then we would recommend either a ceiling installation or consulting with a local professional installer.

Advantages

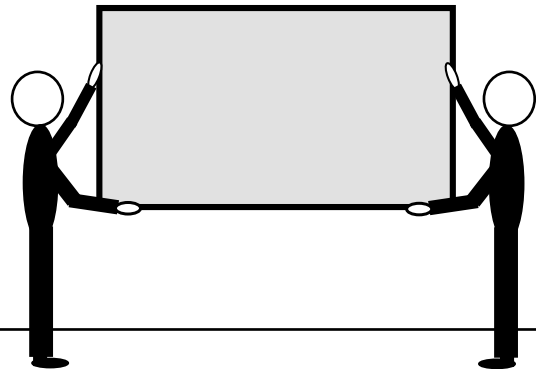

- + Quick set up
- + Minimal tools required
- + Little or no calculations
- + Short cables = high quality video
- + Less expensive installation
- + Screen is optional

Disadvantages

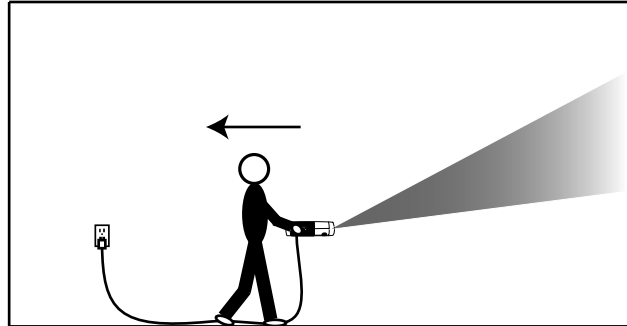

- Cables are visible
- People or pets can tamper with projector
- Easy to walk in light path
- Easy to trip over cables

Pre-installation Checklist

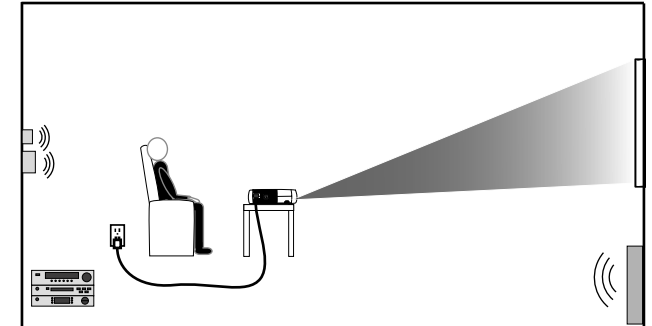

- ☐ Equipment (projector, screen, audio, video, accessories)
- ☐ Cables (audio, video and power)
- ☐ Screen and projector location

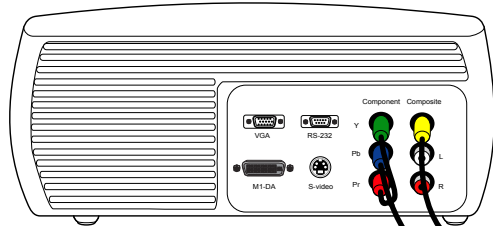

- 1** Install hooks or mounting brackets.
Hang the screen at desired location.

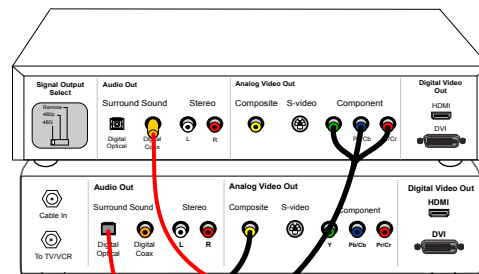

- 2** Plug in the projector. With the InFocus logo screen, move the projector away from the screen until it approximately fits the projection screen.

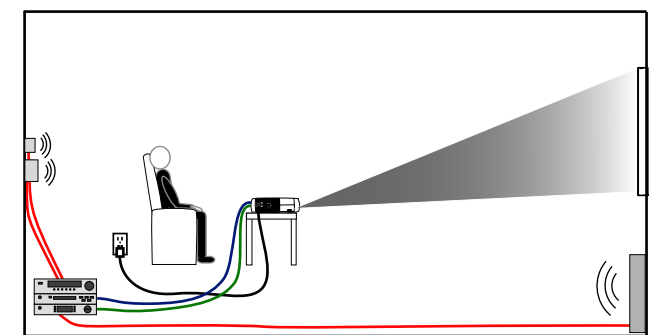

- 3** Place projector on a flat sturdy surface, such as a table or a shelf.

- 4** Connect video cables to projector.

- 5** Connect audio and video cables to sources. Connect audio cables to speaker system.

- 6** Install and test home theater equipment.

Table Top Installation Diagram

* There are many alternate methods to installing a projector other than ceiling mounting. This illustration is one example and shows you the key components of a table top installation.
