

Optoma Introduces the New MovieTime, DV11 Digital DVD Projector

Las Vegas (January 8, 2007) – Optoma, one of the leading manufacturers of digital projection and display devices, today introduced the latest generation of the award-winning MovieTime™, the DV11 DVD projector. The DV11 home theater projector features a built-in DVD player and integrated speakers in a stylish, compact design.

The DV11 delivers bright, vivid images and easy-to-use functions that allow movie enthusiasts to enjoy striking picture quality and engaging video and sound for instant, big-screen home entertainment. With an integrated DVD player and two 5-watt speakers, the DV11 can turn any room into an instant home theater room.

MovieTime is perfectly designed for a wide-range of home entertainment options, from watching the latest DVD releases to playing the hottest gaming titles, when hooked up to a gaming console.

The Optoma MovieTime DV11 is a pure digital DVD projector and accepts direct digital signals from a DVD to the projected image. There is no analog to digital conversion in the signal processing, resulting in a DVD viewing experience with guaranteed color accuracy and distortion-free images.
